Contents

GENERALITIES

01. Safety instructions ..................................................... 7
02. Description of the machine .............................................. 9
03. Technical specifications ............................................... 10
04. Table of stability loads in kg ............................................ 16
05. Table of recommended lubricants ........................................ 18
06. Inspection and maintenance table ....................................... 19
07. Tooling ............................................................. 22

ELECTRIC SYSTEM

08. Parts list of the electric diagram ........................................ 26
09. Control panel descriptive .............................................. 28
10. Location of the electric components ..................................... 32
10.1 Circuit marking
10.2 Relay board (behind the operator’s seat)
10.3 The Solenoid valves (electrovalve)
11. Location harness connector ............................................ 48
11.1 Connectors: relay board U10
11.2 Connectors: computer U01/BCHC and U02/BCHT
11.3 Connectors: U03/Panel control
11.4 Connectors: U04/BCP
11.5 Connectors U06/Motor computer EMR3
12. CAN network ........................................................ 54
13. Air conditioning ...................................................... 56
14. Layout of electrical harnesses .......................................... 57
14.1 - Chassis harness
14.2 - Electrovalves harness
14.3 - Driver’s station harness
14.4 - Motor harness
14.5 - Main harness
14.6 - Seat harness
14.7 - Clamshell rotation harness
14.8 - Heater/air conditioner block harness
14.9 - Turret harness
14.10 - Cab harness
14.11 - Blade harness
14.12 - Rear stabilizer harness
14.13 - Radio remote control harness
14.14 - Collector harness
14.15 - Foot step harness
HYDRAULIC SYSTEM

15. Location of the hydraulic components ............................................. 82
16. Parts list of the hydraulic diagram .................................................... 86
17. Connection of hydraulic components ............................................... 88
   17.1 Travel / slewing
   17.2 Braking
   17.3 Steering (4 wheel steering)
   17.4 Steering (2 wheel steering)
   17.5 Upperstructure / fan return and supply and Load Sensing
   17.6 Main block
   17.7 Attachment without check valve
   17.8 Attachment with check valve
   17.9 Tool carrier
   17.10 Volvo tool carrier
   17.11 Rotation Clamshell and Offset cylinder
   17.12 Foot step
   17.13 Accessories
   17.14 Front dozer blade, Rear stabilisers

18. Adjustment procedure ............................................................... 106
   18.1 Checking engine rpm
   18.2 Adjustment procedure for the fan
   18.3 Adjustment of pilot pressure
   18.4 Equipment pump max. pressure adjustment
   18.5 Installing the flowmeter for adjustment of Delta P / ΔP (LS regulation) or the power regulation
       18.5.1 Adjustment of Delta P (with flowmeter)
       18.5.2 Adjustment of Delta P (with relief valve and without flow meter, auxiliary lines plugged)
   18.6 Checking the power regulation
   18.7 Adjustment of choke valve auxiliary function
   18.8 Torque control limiter adjustment
   18.9 Adjusting the point at which the safety valves start to open (option)
   18.10 Hydraulic adjustment procedure for the transmission
       18.10.1 Adjustment of the HP. Commutation of transmission motor
       18.10.2 Adjust the Snail speed
       18.10.3 Adjusting the travel motor minimum displacement
       18.10.4 Check of Turtle speed
   18.11 Adjustment of the maximum steering pressure, only for 2 wheels steering (for 4WS)

19. Inspection sheet ................................................................. 128

SUPPLEMENT
- Diagnostic trouble codes - EMR3
- Summary of the Mecadiag Pocket softwares
- TECHNICAL MANUALS
- Synthesis from the functions
